

ABSTRACT

A method and system reducing tier-to-tier movement of data in a multi-tiered architecture is disclosed. Rules from a first tier of the architecture are converted to SQL and transferred to a second tier that stores data. This Abstract is provided to comply with rules requiring an Abstract that allows a searcher or other reader to quickly ascertain subject matter of the technical disclosure. This Abstract is submitted with the understanding that it will not be used to interpret or limit the scope or meaning of the claims. 37 CFR 1.72(b).
